

Package ‘FSAdata’

August 24, 2023

Title Data to Support Fish Stock Assessment ('FSA') Package

Version 0.4.1

Date 2023-8-23

Description The datasets to support the Fish Stock Assessment ('FSA') package.

URL <https://fishr-core-team.github.io/FSAdata/>

BugReports <https://github.com/fishR-Core-Team/FSAdata/issues>

License GPL (>= 2)

LazyData true

Depends R (>= 3.0.0)

Suggests dplyr, fishmethods, FSA, knitr, pkgdown, readxl, rmarkdown

Encoding UTF-8

RoxygenNote 7.2.3

NeedsCompilation no

AfricanRivers	<i>Characteristics of a sample of West African rivers.</i>
---------------	--

Description

Characteristics of a sample of West African rivers.

Format

A data frame of 39 observations on the following 6 variables:

river name of the river.

richness fish species richness.

surface surface area in km^2 .

disch mean annual discharge in $\frac{m^3}{s}$.

vegdiv terrestrial vegetation diversity (Shannon's diversity index of vegetation in drainage).

forperc percentage of drainage area covered by lowland rain forest.

Topic(s)

- Other

Source

From Table 1 in Hugueny, B. 1989. West African rivers as biogeographic islands: species richness of fish communities. *Oecologia* 79:236-243. [CSV file](#)

Examples

```
data(AfricanRivers)
str(AfricanRivers)

```

AHerringChile

Ages and lengths of Araucanian Herring from Chilean waters.

Description

Ages and lengths of Araucanian Herring (*Strangomera bentincki*) from Chilean waters.

Format

A data frame with the following 2 variables:

age Age in years.

len Total length (to nearest 0.5 cm).

Topic(s)

- Growth
- Seasonal Growth
- von Bertalanffy
- Somers model

Source

From figure 9 of Cubillos, L.A., D.F. Arcosa, D.A. Bucareya, M.T. Canalesa. 2001. Seasonal growth of small pelagic fish off Talcahuano, Chile (37S, 73W): A consequence of their reproductive strategy to seasonal upwelling? Aquatic Living Resources, 14:115-124. [CSV file](#)

AlewifeLH

Ages of Lake Huron Alewife assigned from otoliths and scales.

Description

Ages of Alewife (*Alosa pseudoharengus*) assessed from otoliths and scales.

Format

A data frame of 104 observations on the following 2 variables:

otoliths Age assigned from examination of otoliths

scales Age assigned from examination of scales

Topic(s)

- Age Comparison
- Age Precision
- Age Bias
- Ageing Error

Source

From Table 1A of Hoenig, J.M., M.J. Morgan, and C.A. Brown. 1995. Analysing differences between two age determination methods by tests of symmetry. Canadian Journal of Fisheries And Aquatic Systems, 52:364-368. Originally from O’Gorman, R., D.H. Barwick, and C.A. Bowen. 1987. Discrepancies between ages determined from scales and otoliths for alewives from the Great Lakes. pp. 203-210 In. Summerfelt, R.C. and G.E. Hall (Eds.) Age and Growth of Fish. Iowa State University Press, Ames, IA. [CSV file](#)

Examples

```

AnchovetaChile

Ages and lengths of Anchoveta from Chilean waters.

Description

Ages (in months) and lengths of Anchoveta (*Engraulis ringens*) from central Chilean waters.

Format

A data frame with 207 observations of the following 3 variables:

age.mon Age in months.

tl.cm Total length (cm).

cohort Year-class.

Topic(s)

- Growth
- Seasonal Growth
- von Bertalanffy
- Somers model

Source

Directly from the authors of Cubillos, L.A., D.F. Arcosa, D.A. Bucareya, M.T. Canalesa. 2001. Seasonal growth of small pelagic fish off Talcahuano, Chile (37S, 73W): A consequence of their reproductive strategy to seasonal upwelling? Aquatic Living Resources 14:115-124. Data were in Figure 9. head(AnchovetaChile)
AnchovetaChile$age <- AnchovetaChile$age.mon/12
plot(tl.cm~age, data=AnchovetaChile)
```

 BassFL

Catch-at-age for Suwanee and Largemouth Bass.

Description

Catch-at-age for Suwanee (*Micropterus notius*) and Largemouth Bass (*Micropterus salmoides*) collected from several lakes in Florida, 2001-2002.

Format

A data frame with 39 observations on the following 5 variables.

species Species of bass (Suwanee and Largemouth)

loc Location (SantaFe, Wacissa, Withlacoochee, Ochlockonee)

year Year (2001, 2002)

num Number of fish captured

age Age of fish at capture

Topic(s)

- Total mortality
- Catch curve

Source

From Figure 2 of Bonvechio, T.F., M.S. Allen, and R.L. Cailteux. 2005. Relative Abundance, Growth, and Mortality of Suwannee Bass in Four Florida Rivers. North American Journal of Fisheries Management 25:275-283. [CSV file](#)

 BGHRfish

Fish information from samples collected from Big Hill Reservoir, KS, 2014.

Description

Fish information from samples collected from Big Hill Reservoir, KS, in May, 2014.

Format

A data frame with 266 observations on the following 6 variables.

UID Unique sample identification number (see [BGHRsample](#))

fishID Unique fish identification number

specCode Numeric code for each species (116="Smallmouth Bass", 118="Largemouth Bass", and 122="Bluegill")

length Total length (mm)

weight Weight (g)

count Number of fish sampled of that species and length

Topic(s)

- Data Manipulation

Note

Used in the [Introductory Fisheries Analyses with R](#) book.

Source

Obtained directly from Ben Neely. [CSV file](#)

See Also

See [BGHRfish](#) for individual fish collected in these samples.

Examples

```
data(BGHRfish)
str(BGHRfish)
head(BGHRfish)
```

BGHRsample

*Information for each electrofishing sample from Big Hill Reservoir,
KS, 2014.*

Description

Information for each electrofishing sample from Big Hill Reservoir, KS, in May, 2014.

Format

A data frame with 20 observations on the following 4 variables.

UID Unique sample identification number

date Data sample was collected

loc Location code for where the sample was collected

effort Effort (minutes) expended for the sample

Topic(s)

- Data Manipulation

Note

Used in the [Introductory Fisheries Analyses with R](#) book.

Source

Obtained directly from Ben Neely. [CSV file](#)

See Also

See [BGHRfish](#) for individual fish collected in these samples.

Examples

```
data(BGHRsample)
str(BGHRsample)

```

BlackDrum2001	<i>Biological data for Black Drum from Virginia waters of the Atlantic Ocean, 2001.</i>
---------------	---

Description

Biological data (lengths, weights, ages (from otoliths), and sex) for Black Drum (*Pogonias cromis*) from Virginia waters of the Atlantic Ocean, 2001.

Format

A data frame with 141 observations on the following 9 variables.

year Year of capture (all 2001)
agid Unique identification number
spname Species name (all “Black Drum”)
month Month of capture
day Day of capture
weight Weight (lbs) – most are missing
tl Total length (mm)
sex Sex (female, male, and unknown)
otoage Age (yrs; from otoliths)

Topic(s)

- Growth
- von Bertalanffy
- Weight-Length

Note

Used in the [Introductory Fisheries Analyses with R](#) book.

Source

Obtained directly from the Virginia Marine Resources Commission via Hank Liao. [CSV file](#)

Examples

```
data(BlackDrum2001)
str(BlackDrum2001)
head(BlackDrum2001)
plot(tl~otoage, data=BlackDrum2001)
```

BloaterLH

Stock and recruitment data for Lake Huron Bloaters, 1981-1996.

Description

Egg deposition and relative abundance of age-3 Lake Huron Bloaters (*Coregonus hoyi*) by year, 1981-1996.

Format

A data frame of 16 observations on the following 3 variables:

year Year of data (1981-1996)
eggs Millions of eggs deposited
age3 Relative abundance of age-3 fish

Topic(s)

- Stock-Recruit
- Recruitment

Source

From (approximately) Figure 7 of Schaeffer, J.S. 2004. Population dynamics of bloaters *Coregonus hoyi* in Lake Huron, 1980-1998. *Ann Zool Fennici*. 41:271-279. [CSV file](#)

Examples

```
data(BloaterLH)
str(BloaterLH)
head(BloaterLH)
op <- par(mfrow=c(1,2),pch=19)
plot(eggs~year,data=BloaterLH,type="l")
plot(eggs~age3,data=BloaterLH)
par(op)
```

BlueCatfish

Ages and lengths of Blue Catfish.

Description

Ages and total lengths of Blue Catfish (*Ictalurus furcatus*) collected from the Wilson Reservoir on the Tennessee River, AL.

Format

A data frame with 119 observations on the following 2 variables.

age Age (from otoliths)

tl Total length (mm)

Topic(s)

- Growth
- von Bertalanffy

Source

From (approximately) Figure 2 of Maceina, M.J. 2007. Use of piecewise nonlinear models to estimate variable size-related mortality rates. North American Journal of Fisheries Management 27:971-977. [CSV file](#)

Examples

```
data(BlueCatfish)
str(BlueCatfish)
head(BlueCatfish)
plot(tl~age,data=BlueCatfish)
```

BlueCrab

Catch and effort data for male Blue Crabs.

Description

Catch and effort data for a population of male Blue Crabs (*Callinectes sapidus*) for a 12-week period.

Format

A data frame with 12 observations on the following 2 variables.

catch A numeric vector of pounds of Blue Crab caught.

effort A numeric vector of lines used per day to catch Blue Crab.

Topic(s)

- Population size
- Abundance
- Depletion
- Leslie method
- DeLury method
- Catchability

Source

From Fischler, K.J. 1965. The use of catch-effort, catch-sampling, and tagging data to estimate a population of blue crabs. Transactions of the American Fisheries Society 94:287-310. [CSV file](#)

Examples

```
data(BlueCrab)
str(BlueCrab)
BlueCrab
```

BluefishAge	<i>Ages of Bluefish assigned from otoliths by two readers.</i>
-------------	--

Description

Ages assigned to Bluefish (*Pomatomus saltatrix*) otoliths by two readers.

Format

A data frame with 445 observations on the following 2 variables.

r1 Ages assigned by the first reader

r2 Ages assigned by the second reader

Topic(s)

- Age Comparison
- Age Precision
- Age Bias
- Ageing Error

Source

From Figure 2 in Chapter 3 (Bluefish) of the VMRC Final Report on Finfish Ageing, 2003 by the Center for Quantitative Fisheries Ecology at Old Dominion University. [CSV file](#)

Examples

```
data(BluefishAge)
str(BluefishAge)
head(BluefishAge)
plot(r1~r2,data=BluefishAge)
```

BluegillIL	<i>Length-at-marking and recapture and time-at-large of Bluegill.</i>
------------	---

Description

Length-at-marking and recapture and time-at-large for Bluegill (*Lepomis macrochirus*) originally captured in Spring 2010 from Inch Lake, Wisconsin.

Format

A data frame with 61 observations on the following 5 variables:

- tag** Unique Floy tag number.
- lenMark** length (mm) at tagging.
- lenRecap** Length (mm) at recapture.
- deltaLen** Change in length (mm).
- deltaTime** Time-at-large (yrs).

Topic(s)

- Growth
- von Bertalanffy
- Fabens method

Source

These unpublished data are from Derek H. Ogle, Northland College. **Do not use for other than educational purposes without permission from the source.** [CSV file](#)

Examples

```
data(BluegillIL)
str(BluegillIL)
head(BluegillIL)
plot((lenRecap-lenMark)~deltaTime,data=BluegillIL)
```

BluegillLM

Lengths and weights for Bluegill from Lake Mary, MN.

Description

Lengths (standard, fork, and total) and weights for Bluegill (*Lepomis macrochirus*) collected from Lake Mary, Minnesota.

Format

A data frame with 100 observations on the following 5 variables:

- sernum** Unique serial number
- sl** Standard length (mm)
- fl** Fork length (mm)
- tl** Total length (mm)
- wght** Weight (g)

Topic(s)

- Weight-Length
- Length Conversion
- Length Frequency

Source

[CSV file](#)

See Also

lakemary in **alr3** for a different sample of Bluegill from Lake Mary that has length and age.

Examples

```
data(BluegillLM)
str(BluegillLM)
head(BluegillLM)
op <- par(mfrow=c(3,2),pch=19)
plot(wght~sl,data=BluegillLM)
plot(wght~fl,data=BluegillLM)
plot(wght~tl,data=BluegillLM)
plot(tl~fl,data=BluegillLM)
plot(tl~sl,data=BluegillLM)
plot(fl~sl,data=BluegillLM)
par(op)
```

BluntnoseIL1

Subsampled lengths of Bluntnose Minnows from Inch Lake, WI.

Description

Total lengths for a subsample from 144 Bluntnose Minnows (*Pimephales notatus*) from Inch Lake, WI in May, 2007.

Format

A data frame of 25 observations on the following 3 variables:

- netID** a netID factor (all 41)
- species** species name (all Bluntnose)
- tl** total length (inches to nearest 0.1)

Topic(s)

- Length Frequency
- Length Expansion
- Size Structure
- PSD

Source

Derek H. Ogle, personal collection. [CSV file](#)

See Also

[InchLake1](#), [InchLake2](#).

Examples

```
data(BluntnoseIL1)
str(BluntnoseIL1)
head(BluntnoseIL1)
```

Bonito

Ages and lengths of Australian Bonito.

Description

Ages and lengths of Australian Bonito (*Sarda australis*).

Format

A data frame with the following 3 variables:

sex Sex (Female, Juvenile, Male).

age Age in decimal years.

fl Total length (to nearest 0.1 cm).

Topic(s)

- Growth
- Seasonal Growth
- von Bertalanffy
- Somers model

Source

From figure 3 of Stewart, J., W. Robbins, K. Rowling, A. Hegarty, and A. Gould. 2013. A multi-faceted approach to modelling growth of the Australian bonito, *Sarda australis* (Family Scombridae), with some observations on its reproductive biology. *Marine and Freshwater Research* 64:671-678. [CSV file](#)

Examples

head(Bonito)
plot(fl~age,data=Bonito)
```

BrookTroutNC	<i>Stock and recruitment data for Brook Trout from Ball Creek, NC, 1991-2004.</i>
--------------	---

Description

Stock and recruitment data for Brook Trout (*Salvelinus fontinalis*) from Ball Creek, NC, 1991-2004.

Format

A data frame with 10 observations on the following 2 variables.

adult a numeric vector giving autumn adult density (number per square meter)

yoy a numeric vector giving autumn YOY density (number per square meter) in following year

Topic(s)

- Stock-Recruit
- Recruitment

Note

The authors fit a linear model to the stock-recruit relationship.

Source

From (approximately) Figure 5 in Grossman, G.D., R.E. Ratajczak, C.M. Wagner, and J.T. Petty. 2010. Dynamics and regulation of the southern brook trout (*Salvelinus fontinalis*) population in an Appalachian stream. *Freshwater Biology* 55:1494-1508. [CSV file](#)

Examples

BrookTroutNEWP

Catches in removal events for Brook Trout in the Nashwaak Experimental Watersheds Project.

Description

Catches in removal events for Brook Trout (*Salvelinus fontinalis*) in two streams in the the Nashwaak Experimental Watersheds Project on multiple dates.

Format

A data frame of 16 observations on the following 7 variables:

stream Stream (UNM=Upper Narrows Mountain Brook and Hay=Hyaden Brook).

section Section of stream. See source.

date Date of collections.

first Catch on the first removal pass.

second Catch on the second removal pass.

third Catch on the third removal pass.

fourth Catch on the fourth removal pass.

Topic(s)

- Population size
- Abundance
- Removal

Source

From Table 1 in Schnute, J. 1983. A new approach to estimating populations by the removal method. Canadian Journal of Fisheries and Aquatic Sciences, 40:2153-2169. [CSV file](#)

See Also

## extract data for one stream, section, and date (e.g., 3rd row)  
BrookTroutNEWP[3,]
```

BrookTroutNEWPI	<i>Catches in removal events for Brook Trout in the Nashwaak Experimental Watersheds Project.</i>
-----------------	---

Description

Catches in removal events for Brook Trout (*Salvelinus fontinalis*) in two streams in the the Nashwaak Experimental Watersheds Project on multiple dates. Includes results from Schnute (1983).

Format

A data frame of 16 observations on the following 7 variables:

sample A unique identified for the sample.

stream Stream (UNM=Upper Narrows Mountain Brook and Hay=Hyaden Brook).

section Section of stream. See source.

date Data of collections.

first Catch on the first removal pass.

second Catch on the second removal pass.

third Catch on the third removal pass.

fourth Catch on the fourth removal pass.

Moran.N Schnute (1983) estimate of N using the Moran (1951) method.

Moran.NLCI Schnute (1983) estimate of N 95% LCI using the Moran (1951) method.

Moran.NUCI Schnute (1983) estimate of N 95% UCI using the Moran (1951) method.

Moran.p Schnute (1983) estimate of p using the Moran (1951) method.

Moran.LH Schnute (1983) negative log likelihood using the Moran (1951) method.

Schnute.N Schnute (1983) estimate of N.

Schnute.NLCI Schnute (1983) estimate of N 95% LCI.

Schnute.NUCI Schnute (1983) estimate of N 95% UCI.

Schnute.p1 Schnute (1983) estimate of p1.

Schnute.p Schnute (1983) estimate of p.

Schnute.LH Schnute (1983) negative log-likelihood.

ChiSq Schnute (1983) chi-square from likelihood ratio comparison of Moran and Schnute methods.

Topic(s)

- Population size
- Abundance
- Removal

Source

From Tables 1-3 in Schnute, J. 1983. A new approach to estimating populations by the removal method. Canadian Journal of Fisheries and Aquatic Sciences, 40:2153-2169. [CSV file](#)

```

BrookTroutOnt	<i>Summarized single mark-recapture data for Brook Trout across many years.</i>
---------------	---

Description

The number of Brook Trout (*Salvelinus fontinalis*) marked, captured, and recaptured for several years on Meach Lake in central Ontario.

Format

A data frame with 7 observations on the following 5 variables.

year Year of the collection

mark Total number of fish marked on the marking run

catch Total number of fish caught on the recapture run

recap Total number of previously marked fish in the recapture run

correction Number of age-1 fish to be added to final estimated based on mark-recapture to correct for gear selectivity of age-1 fish

Topic(s)

- Population Size
- Abundance
- Mark-Recapture
- Capture-Recapture
- Petersen

Source

BrownTroutVC1	<i>Single census mark-recapture data with lengths for Brown Trout from Valley Creek, MN.</i>
---------------	--

Description

Single census mark-recapture data for Brown Trout (*Salmo trutta*) from Valley Creek, MN captured in April, 1988. Length of trout was recorded so that abundance estimated can be made by length categories.

Format

A data frame with 1014 observations on the following 3 variables.

len A numeric vector of total length measurements (cm)

sample A factor variable representing the sample in which the fish was captured. The marking run is labelled with `first` and the recapture run is labelled with `second`

recap A factor variable representing whether the fish was a “recap”ture in the second sample (YES) or not (NO)

Topic(s)

- Population Size
- Abundance
- Mark-Recapture
- Capture-Recapture
- Petersen

Source

Obtained directly from Tom Kwak, North Carolina Cooperative Unit at North Carolina State University and part of the data published in Kwak, T.J. and T.F. Waters. 1997. Trout production dynamics and water quality in Minnesota streams. Transactions of the American Fisheries Society, 126:35-48. [CSV file](#)

BSkateGB

Stock and recruitment data for Barndoor Skate from Georges Bank, 1966-2007.

Description

Stock and recruitment data for Barndoor Skate (*Dipturus laevis*) from Georges Bank for three seasons.

Format

A data frame with 31 observations on the following 4 variables.

spawners a numeric vector giving CPUE of spawning fish

recruits a numeric vector containing the CPUE of recruits

year a numeric vector containing the year of the survey (recruits have been properly lagged (3 years) to match with spawners)

season a factor containing the season of capture (fall, spring, winter)

Topic(s)

- Stock-Recruit
- Recruitment

Note

Only years within each season where more than one spawner and more than one recruit were captured were recorded. The authors noted that the Beverton-Holt model could NOT be fit to the winter data.

Source

Estimated (using digitize) from figures 4-6 in Gedamke, T., J.M. Hoenig, W.D. DuPaul, and J.A. Musick. 2009. Stock-recruitment dynamics and the maximum population growth rate of the barn-door skate on Georges Bank. *North American Journal of Fisheries Management* 29:512-526. [CSV file](#)

BullTroutRML1	<i>Lengths and weights for Bull Trout from two Rocky Mountain lakes and two eras.</i>
---------------	---

Description

Lengths and weights of Bull Trout (*Salvelinus confluentis*) from two Rocky Mountain lakes in Alberta, CAN and two eras.

Format

A data frame with 137 observations on the following 3 variables:

fl Fork length (mm)
mass Wet mass (g)
era Era of collection (1977-79 and 2001)

Topic(s)

- Weight-Length
- Length Frequency

Note

The historical (1977-1980) era samples were from before restrictive sportfishing regulatory regimes were implemented (in the 1990s) that led to changes in abundance and population structure of bull trout.

Source

From (approximately) Figure 2 of Parker, B.R., D.W. Schindler, F.M. Wilhelm, and D.B. Donald. 2007. Bull trout population responses to reductions in angler effort and retention limits. North American Journal of Fisheries Management 27:848-859. [CSV file](#)

BullTroutRML2	<i>Ages and lengths of Bull Trout from two Rocky Mountain lakes at two times.</i>
---------------	---

Description

Assigned ages (from otoliths) and fork lengths of Bull Trout (*Salvelinus confluentis*) from two Rocky Mountain lakes in Alberta, CAN before and after a regulation change.

Format

A data frame with 96 observations on the following 4 variables:

age Age (from otoliths).

fl Fork length (mm).

lake Lake (Harrison and Osprey).

era Era of collection (1977-80 and 1997-01). See details.

Topic(s)

- Growth
- Von Bertalanffy growth model

Note

The historical (1977-1980) era samples were from before restrictive sportfishing regulatory regimes were implemented (in the 1990s) that led to changes in abundance and population structure of bull trout.

BullTroutTC

Catch-at-age for Bull Trout in Trestle Creek, ID.

Description

Catch-at-age (actually carcasses-at-age) for Bull Trout (*Salvelinus confluentis*) in Trestle Creek, ID.

Format

A data frame with 6 observations on the following 2 variables.

age A numeric vector of assigned ages (from otoliths).

carcasses A numeric vector of number of carcasses found in and along Trestle Creek.

Topic(s)

- Mortality
- Catch curve

Source

From (approximately) Figure 4a in Downs, C.C., D. Horan, E. Morgan-Harris, and R. Jakubowski. 2006. Spawning demographics and juvenile dispersal of an adfluvial bull trout population in Trestle Creek, Idaho. *North American Journal of Fisheries Management* 26:190-200. [CSV file](#)

Casselman1990

*Instantaneous growth rates for two calcified ageing structures.***Description**

Instantaneous growth rates (percent change per day) for body growth and two calcified ageing structures from age 1-4 female Northern Pike (*Esox lucius*) from Wickett Lake, Ontario.

Format

A data frame with 12 observations on the following 4 variables.

day A numeric vector of days since the beginning of the study.

body A numeric vector of instantaneous growth rates (percent change per day) for body growth.

cleithrum A numeric vector of instantaneous growth rates (percent change per day) for cleithra.

scale A numeric vector of instantaneous growth rates (percent change per day) for scales.

Topic(s)

- Other

CCatfishNB

Catch-at-age of Channel Catfish from two sections of the Platte River, NB.

Description

Catch-at-age of Channel Catfish (*Ictalurus punctatus*) from two sections of the Platte River, NB, in 2007 and 2008.

Format

A data frame of 26 observations on the following 3 variables:

age Age (years) assigned from pectoral spines

catch Number of captured fish with baited hoopnets and electrofishing

loc Location of collection (Central and Lower)

Topic(s)

- Mortality
- Catch curve

Note

Used in the [Introductory Fisheries Analyses with R](#) book.

CiscoTL

Lengths, weights, and sex of Cisco from Trout Lake, WI.

Description

Lengths, weights, and sex for Cisco (*Coregonus artedii*) from Trout Lake, WI, 1981-2006. Fish were collected with a variety of gears.

Format

A data frame of 8594 observations on the following 8 variables:

lakeid Lake name (all TR=Trout Lake)
year4 Year of capture
sampldate Date of capture
gearid Capture gear type
spname Species name (all CISCO)
length Total length (nearest mm) at capture
weight Weight (nearest 0.1 or 1 g) at capture
sex Sex (F=Female, I=Immature, M=Male)

Topic(s)

CreekChub

Ages (subsample) and lengths (all fish) for Creek Chub.

Description

Ages (subsample) and lengths (all fish) for Creek Chub (*Semotilus atromaculatus*).

Format

A data frame with 218 observations on the following 2 variables.

len Total length (mm)

age Assigned ages (yrs; from scales)

Details

As many as 10 fish per 10 mm length interval were sampled for age assignment with scales.

Topic(s)

- Age-Length Key
- Growth

Note

Used in the [Introductory Fisheries Analyses with R](#) book.

Source

Recreated (random digits were added to construct mm lengths from the cm length bins) from information in Box 15.2 of Quist, M.C., Pegg, M.A., and DeVries, D.R. 2012. Age and growth. Croaker1

Ages of Atlantic Croaker assigned from otoliths by two readers.

Description

Otolith age of Atlantic croaker (*Micropogonias undulatus*) from two readers.

Format

A data frame of 317 observations on the following 2 variables:

reader1 Age assigned by the first reader

reader2 Age assigned by the second reader

Topic(s)

- Age Comparison
- Age Precision
- Age Bias
- Ageing Error

Source

From Figure 2 in Chapter 1 (Atlantic Croaker) of the VMRC Final Report on Finfish Ageing, 1999 by the Center for Quantitative Fisheries Ecology at Old Dominion University. [CSV file](#)

Examples

CutthroatALf

Capture histories (9 samples) of Cutthroat Trout from Auke Lake.

Description

Summarized ("RMark" format) capture histories of Cutthroat Trout (*Oncorhynchus clarki*) in Auke Lake, Alaska, from samples taken in 1998-2006.

Format

A data frame with 47 observations on the following 2 variables.

ch Unique capture history (as a character string)

freq Frequency of fish with that capture history

Topic(s)

- Population Size
- Abundance
- Mark-Recapture
- Capture-Recapture
- Jolly-Seber
- Capture History

Source

Entered from Appendix A.3 of Harding, R.D., C.L. Hoover, and R.P. Marshall. 2010. Abundance of Cutthroat Trout in Auke Lake, Southeast Alaska, in 2005 and 2006. Alaska Department of Fish and Game Fisheries Data Series No. 10-82. Accessed from <http://www.sf.adfg.state.ak.us/FedAidPDFs/FDS10-82.pdf>. [CSV file](#)

See Also

See `CutthroatAL` for the same data in “individual” fish format (i.e., the data in this file were converted using `capHistConvert` from **FSA**). See `mrOpen` from **FSA** for an example analysis.

Examples

```

DarterMahon

Catch and effort data for Fantail Darter.

Description

Catch and effort data for Fantail Darter (*Etheostoma flabellare*) from seven removal events conducted by Mahon (1980).

Format

A data frame with 7 observations on the following 2 variables.

catch Catch of Fantail Darter.

effort Constant electrofishing effort.

Details

Catch (number of fish) was recorded. Effort was a constant amount of electrofishing for each sampling event and is, thus, entered as a constant value of 1.

These data are used in many publications because the stream section was rotenoned following the removal surveys to determine a known population size of 1151 individuals.

Topic(s)

- Population size
- Abundance
- Depletion methods
- Leslie method
- DeLury method
- Catchability

Source

From Mahon, R. 1980. Accuracy of catch-effort methods for estimating fish density and biomass in streams. *Environmental Biology of Fishes*. 4:343-363. [CSV file](#)

Examples

str(DarterMahon)
head(DarterMahon)
```

DarterOnt

Ages and lengths of Channel Darters from two locations.

Description

Assigned ages (from otoliths), total length, and collection location of Channel Darter (*Percina copelandi*).

Format

A data frame of 54 observations on the following 3 variables:

age Otolith age-at-capture (years).

tl Total length (nearest 0.1 mm) at capture.

river Location of capture (Salmon or Trent Rivers).

Topic(s)

- Growth
- von Bertalanffy

Note

The original author used a linear model to describe the relationship between length and age.

Source

From Figure 2 of Reid, S.M. Age estimates and length distributions of Ontario channel darter (*Percina copelandi*) populations. *Journal of Freshwater Ecology* 19:441-444. [CSV file](#)

Deckeretal1999

Catches in removal events of Cutthroat Trout and Coho Salmon in Little Stawamus Creek (British Columbia, Canada) in 1997.

Description

Catches of Coho Salmon (*Oncorhynchus kisutch*) and Cutthroat Trout (*Oncorhynchus clarki*) in consecutive removal events at various locations in Little Stawamus Creek (British Columbia, Canada) in 1997.

Format

A data frame of 26 observations on the following 10 variables:

reach Reach number of sampling location.

habitat Habitat type of sampling location – pool, riffle, or run.

strata Stratum number of sampling location.

area Area (m²) of sampling location.

coho1 Coho Salmon removed on the first pass.

coho2 Coho Salmon removed on the second pass.

coho3 Coho Salmon removed on the third pass.

cutt1 Cutthroat Trout removed on the first pass.

cutt2 Cutthroat Trout removed on the second pass.

cutt3 Cutthroat Trout removed on the third pass.

Topic(s)

- Population size
- Abundance
- Removal

FHCatfishATL

*Catch-at-age of Flathead Catfish from three Atlantic rivers.***Description**

Catch-at-age of Flathead Catfish (*Pylodictis olivaris*) from three populations of Atlantic rivers – Lumber River, Northeast Cape Fear River (NCF), and Neuse River.

Format

A data frame of 44 observations on the following 3 variables:

river Collection river (Lumber, NCF, and Neuse).

age Age (yrs) assessed by otolith.

number Number of captured fish.

Topic(s)

- Mortality
- Catch curve

Source

From (approximately) Figure 2 in Kwak, T.J., W.E. Pine III, and D.S. Waters. 2006. Age, growth, and mortality of introduced flathead catfish in Atlantic rivers and a review of other populations. *North American Journal of Fisheries Management* 26:73-87. [CSV file](#)

 FSAdata

Data to support the FSA package.

Description

This package contains data to support the FSA package.

Usage

FSAdataTopics

Format

An object of class character of length 16.

Details

This package contains additional data files that can be used for common fisheries stock assessment methods described in the **FSA** package and on the [fishR website](#).

The help files for these datasets are embedded with topics that can be searched to find data files that can be analyzed with those topics. For example, use the following commands to find data files for the corresponding topics.

help.search("Length Expansion", package=c("FSAdata", "FSA"))	Expand subsampled lengths.
help.search("Length Conversion", package=c("FSAdata", "FSA"))	Convert between length types.
help.search("Age Comparison", package=c("FSAdata", "FSA"))	Ageing (error, precision, or comparison).
help.search("Age-Length Key", package=c("FSAdata", "FSA"))	Age-Length Key data.
help.search("Weight-Length", package=c("FSAdata", "FSA"))	Weight-length model data.
help.search("Length Frequency", package=c("FSAdata", "FSA"))	Length frequency data.
help.search("Size Structure", package=c("FSAdata", "FSA"))	Size structure data.
help.search("Abundance", package=c("FSAdata", "FSA"))	Data for abundance estimates.
help.search("Capture-Recapture", package=c("FSAdata", "FSA"))	Mark-recapture data.
help.search("Mark-Recapture", package=c("FSAdata", "FSA"))	Mark-recapture data.
help.search("Capture History", package=c("FSAdata", "FSA"))	Capture history mark-recapture (compare to sumr)
help.search("Petersen", package=c("FSAdata", "FSA"))	Petersen mark-recapture (closed population, single)
help.search("Schnabel", package=c("FSAdata", "FSA"))	Schnabel mark-recapture (closed population, multiple)
help.search("Jolly-Seber", package=c("FSAdata", "FSA"))	Jolly-Seber mark-recapture (open population, multiple)
help.search("Depletion", package=c("FSAdata", "FSA"))	Depletion (Leslie, DeLury) methods for estimating abundance
help.search("Removal", package=c("FSAdata", "FSA"))	Removal (K-pass) methods for estimating abundance
help.search("Mortality", package=c("FSAdata", "FSA"))	Data for mortality estimation.
help.search("Catch curve", package=c("FSAdata", "FSA"))	Catch curve.
help.search("Growth", package=c("FSAdata", "FSA"))	Growth model data.
help.search("Recruitment", package=c("FSAdata", "FSA"))	Stock-recruitment and recruitment time-series data
help.search("Maturity", package=c("FSAdata", "FSA"))	Maturity data.

Additional fisheries-related data sets are in the **FSA** and **fishmethods** packages.

FWDrumLE1

Ages and lengths of Lake Erie Freshwater Drum.

Description

Assigned ages (from scales) and measured total lengths for each of 1577 Freshwater Drum (*Aplodinotus grunniens*) from Lake Erie.

Format

A data frame with 1577 observations on the following 2 variables.

age Assigned ages (from scales).

tl Measured total lengths (mm).

Topic(s)

- Growth
- von Bertalanffy

Source

Simulated from Table 3 of Bur, M.T. 1984. Growth, reproduction, mortality, distribution, and biomass of freshwater drum in Lake Erie. *Journal of Great Lakes Research*. 10:48-58. [CSV file](#)

See Also

Examples

```
data(FWDrumLE1)
str(FWDrumLE1)
head(FWDrumLE1)
plot(tl~age,data=FWDrumLE1)
```

FWDrumLE2

Ages (subsample) and lengths (all fish) for Freshwater Drum from Lake Erie.

Description

A total of 253 fish dispersed proportionately over 10-mm total length intervals from the [FWDrumLE1](#) data frame was obtained for age assignment. The remaining fish in the file were only measured for length (i.e., the ages were deleted). This data file can be used to demonstrate the use of age-length keys.

Format

A data frame with 1577 observations on the following 2 variables.

age Assigned ages (from scales).

tl Measured total lengths (mm).

Topic(s)

- Age-Length Key

Source

[CSV file](#)

See Also

[FWDrumLE1](#).

Examples

```

Ghats

Species accumulation data for fish of the Western Ghats of India.

Description

Species accumulation data for fish of the Western Ghats of India derived from nine random samples of publications.

Format

A data frame with 350 observations on the following 2 variables.

unit a manuscript that was reviewed.

cumspec cumulative number of species described in the reviewed manuscripts.

Topic(s)

- Other

Source

From (approximately) Figure 1 in Dahanukar, N., R. Raut, and A. Bhat. 2004. Distribution, endemism and threat status of freshwater fishes in the Western Ghats of India. *Journal of Biogeography* 31:123-126. [CSV file](#)

GreensCreekMine

Catches in removal events of Coho Salmon and Dolly Varden Char at various locations near the Greens Creek (AK) Mine site.

Description

Catches in removal events of Coho Salmon (*Oncorhynchus kisutch*) and Dolly Varden Char (*Salvelinus malma*) at various locations near the Greens Creek (AK) Mine site.

Format

A data frame of 66 observations on the following 8 variables:

location Sampling location.

year Sampling year.

species Species (Coho. Salmon or Dolly. Varden).

set1 Catch on the first removal pass.

set2 Catch on the second removal pass.

set3 Catch on the third removal pass.

min.FL Minimum observed fork length.

max.FL Maximum observed fork length.

Details

Reaches were isolated by natural features, such as shallow riffles. The sample reaches were saturated with 6.35 mm (0.25 in) minnow traps baited with whirl packs containing disinfected salmon eggs. The traps were deployed for 1.5 h and then retrieved where each fish was transferred into a plastic bucket, and the trap was re-baited and re-set for another 1.5 h soak. In between trapping events, fish were processed – measured and recorded FL to the nearest 1 mm, weight to the nearest 0.1 g, and species identified. Captured fish were retained during the sample period and returned alive after all three passes were complete.

Herman

Lengths for Walleye, Yellow Perch, Black Crappie, and Black Bullheads from Lake Herman, SD.

Description

Total lengths of Walleye (*Sander vitreus*), Yellow Perch (*Perca flavescens*), Black Crappie (*Pomoxis nigromaculatus*), and Black Bullheads (*Ameiurus melas*) for four years in Lake Herman, SD.

Format

A data frame of 5931 observations on the following 3 variables:

tl Total lengths (cm).
spec Species codes (wae=walleye, yep=yellow perch, bkc=black crappie, and bbh=black bullhead).
yr Capture years.

Details

Lake Herman was sampled on June 20-22, 2005 with four overnight gillnet sets and 10 overnight trapnet sets. The trapnets were constructed with 19-mm (0.75 in) bar-mesh netting, 0.9 m high x 1.5 m wide (3 ft high x 5 ft wide) frames and 18.3 m (60 ft) long leads. The gillnets were 45.7 m long x 1.8 m deep (150 ft long x 6 ft deep) with one 7.6 m (25 ft) panel each of 13, 19, 25, 32, 38 and 51-mm (0.5, 0.75, 1, 1.25, 1.5, and 2 in) bar-mesh monofilament netting.

JonesStockwell	<i>Catches in removal events of Brown and Rainbow Trout at various locations.</i>
----------------	---

Description

Catches of Brown (*Salmo trutta*) and Rainbow Trout (*Oncorhynchus mykiss*) in consecutive removal events at various locations.

Format

A data frame of 40 observations on the following 10 variables:

species Species of trout (brown or rainbow).

site Site in the watershed. See source.

age0 Logical is TRUE if age=0 and FALSE if age is >0.

first Catch on the first removal pass.

second Catch on the second removal pass.

third Catch on the third removal pass.

pop.cs Population estimate by Carle-Strub method.

pop.sch Population estimate by Schnute method.

q.cons Logical is TRUE if catchability was constant.

rejected Logical is TRUE if Schnute method rejected the population estimate because the standard error was too large.

LakeTroutALTER

Biological data for Lake Trout from the Arctic LTER (AK).

Description

Biological data (lengths, weight, age, and sex) of Lake Trout (*Salvelinus namaycush*) sampled from Lake NE12 of the Arctic Long Term Ecological Research location.

Format

A data frame of 86 observations on the following 6 variables:

- id** A unique identification number.
- tl** Total Length (nearest mm) at capture.
- fl** Fork Length (nearest mm) at capture.
- sl** Standard Length (nearest mm) at capture.
- w** Weight (nearest g) at capture.
- otorad** Total otolith radius (mm) at capture.
- age** Age (completed growing seasons) at capture.
- sex** Sex of the fish (F=female and M=male).

Details

Lake trout were removed from Lake NE12 in the summers of 1986, 1988, and 1989 using five-panel experimental gill nets (mesh size of 0.75, 1, 1.5, 2, and 2.5 inches). Lengths, weights, and sex were recorded from the fish while otoliths, and if possible, stomachs and gonads were removed for future analysis. A check was performed on several otoliths by an independent colleague and prevents introduction of bias due to familiarity with the samples. The original file was “cleaned” in the following ways:

1. Only Lake Trout were kept in the data file.
2. All unknown sex fish were removed.
3. Fish with missing data (length, weight, age, or sex) were removed.
4. Decimals were removed from the ages.
5. The unique IDs for fish from 1989 were changed to start at 500.
6. The weight of fish number 509 was changed from 100 to 1100.

LJCisco	<i>Ages and lengths of Longjaw Cisco from two locations in Lake Michigan.</i>
---------	---

Description

Assigned age (by scales) and total length of Longjaw Cisco (*Leucichthys alpenae*) captured at two locations in Lake Michigan.

Format

A data frame with 378 observations on the following 3 variables.

age Assigned age (by scales).

tl Measured total length (mm).

loc Capture location (NE=northeast and S=south).

Topic(s)

- Growth
- von Bertalanffy

Source

Simulated from age-length data provided in tables 2 and 3 of Jobes, F.W. 1946. The age, growth, and distribution of the longjaw cisco, *Leucichthys alpenae* Koelz, in Lake Michigan. Transactions of the American Fisheries Society 76:215-247. [CSV file](#)

LobsterHI

Catch and effort data for Hawaiian Islands Slipper Lobster.

Description

Catches of Slipper Lobster (*Scyllarides squammosus*) in three categories from the vicinity of Laysan Bank, Hawaiian Islands on 34 consecutive days in 1986.

Format

A data frame with 34 observations on the following 6 variables.

day Day of the catch

legal Number of legal lobsters caught.

sublegal Number of sub-legal lobsters caught.

berried Number of egg-bearing lobsters caught.

total Total number of lobsters caught.

effort Total daily effort expended.

Details

Catch (numbers) of lobster in three categories - legal (tail weight greater than 85g), sublegal (tail weight less than 85g), and berried (egg-bearing females). Sublegal and berried lobsters were returned to the water.

The vessel fished between 11 June and 14 July 1986 in the vicinity of Laysan Island and its associated bank. The daily operations of the vessel involved deploying and hauling 1,125 Fathom Plus lobster traps set in strings spaced at 30 m intervals. They were fished in 7 strings of about 160 traps each and baited with Pacific Mackerel, *Scomber japonicus*. Strings were soaked overnight and retrieved the following day; therefore, the standard unit of effort is the trap-haul.

Topic(s)

- Population size
- Abundance
- Depletion methods
- Leslie method
- DeLury method
- Catchability

Source

From Table 1 of Clarke, R.P., and S.S. Yoshimoto. 1990. Application of the Leslie model to commercial catch and effort of the slipper lobster, *Scyllarides squammosus*, fishery in the northwestern hawaiian islands. Marine Fisheries Review 52(2):1-7. [CSV file](#)

LobsterPEI

Catch and effort data for Prince Edward Island Lobster.

Description

Catch and effort data for Lobster from 33 days in 1944 from the Tignish area of Prince Edward Island.

Format

A data frame with 34 observations on the following 3 variables.

day Day of the catch. Day 1 is 2-May-1944.

catch Catch of Lobster in 1000s of pounds.

effort Total daily effort expended in 1000s of traps.

Details

Catch (1000s of pounds) and effort (1000s of traps) of Lobster from 33 days in 1944 from the Tignish area of Prince Edward Island. The data start on 2-May. These data are from DeLury (1947) who used the data after 22-May (i.e., day 16) to illustrate his depletion method. The data were also used in Example 7.1 of Seber (2002). DeLury (1947) noted that the weight of Lobster did not change appreciably over time so that the poundage caught is a reasonable surrogate for numbers caught.

Topic(s)

- Population size
- Abundance
- Depletion methods
- Leslie method
- DeLury method
- Catchability

Menhaden1

Catch-at-age for Gulf Menhaden, 1964-2004.

Description

Estimated catch-at-age for Gulf Menhaden (*Brevoortia patronus*), 1964-2004 from the reduction fishery in the U.S. Gulf of Mexico.

Format

A data frame with 41 observations on the following 7 variables.

year Year of capture.

age0 Estimated catch (millions) of age-0 fish.

age1 Estimated catch (millions) of age-1 fish.

age2 Estimated catch (millions) of age-2 fish.

- age3** Estimated catch (millions) of age-3 fish.
- age4** Estimated catch (millions) of age-4 fish.
- age5** Estimated catch (millions) of age-5 fish.
- age6** Estimated catch (millions) of age-6 fish.

Topic(s)

- Mortality
- Catch curve

Source

```

PikeHL

Capture histories (2 samples) of Northern Pike from Harding Lake.

Description

Capture histories for Northern Pike (*Esox lucius*) captured from Harding Lake, 1990.

Format

A data frame with 481 observations on the following 3 variables.

fish a numeric vector of unique fish identification numbers

first a numeric vector of indicator variables for the first sample (1=captured)

second a numeric vector of indicator variables for the second sample (1=captured)

Topic(s)

- Population Size
- Abundance
- Mark-Recapture
- Capture-Recapture
- Petersen
- Capture History

Note

Only Northern Pike >449 mm were considered here.

Source

Capture histories simulated from summarized data in table 2 and text of Burkholder, A. 1991. Abundance and composition of northern pike, Harding Lake, 1990. Fishery Data Series 91-9, Alaska Department of Fish and Game. [Was (is?) from <http://www.sf.adfg.state.ak.us/FedAidpdfs/Fds91-09.pdf>.] [CSV file](#)

PikeNYPartial2	<i>Capture histories (4 samples) of a subset of Northern Pike from Buckthorn Marsh.</i>
----------------	---

Description

Capture histories (4 samples), in capture-by-date format, of a subset of Northern Pike from Buckthorn Marsh.

Format

A data frame with 69 observations on the following 2 variables.

sample Name of the sample taken

id Unique fish identification numbers

Details

Each line consists of the date and unique fish identification number over four samples of northern pike (*Esox lucius*) in Buckthorn Marsh. This file contains the capture histories for only those pike captured from April 1-4.

Topic(s)

- Population Size
- Abundance
- Mark-Recapture
- Capture-Recapture
- Schnabel
- Schumacher-Eschmeyer
- Capture History

Source

Simulated from summary data in Table C-1 of New York Power Authority. 2004. Use of Buckhorn Marsh and Grand Island tributaries by Northern Pike for spawning and as a nursery. Technical report, New York Power Authority, January 2004. Niagara Power Project (FERC No. 2216). [CSV file](#)

PikeWindermere *Stock and recruitment data for Northern Pike from Lake Windermere, 1944-1981.*

Description

Stock and recruitment data for Northern Pike (*Esox lucius*) from Lake Windermere, 1944-1981.

Format

A data frame of 75 observations on the following two variables:

year Year

stock Female biomass (kg)

recruits Number at age-2

basin Basin of Windermere (North or South)

tdd14 Temperature degree-days over 14C

Topic(s)

- Stock-Recruit
- Recruitment

Note

Stock values were originally reported in 1000s of kgs and recruits were originally recorded in tens of numbers. Thus, plots look very discrete.

Source

From table 3 in Kipling, C. 1983. Changes in the population of pike (*Esox lucius*) in Windermere from 1944 to 1981. *Journal of Animal Ecology* 52:989-999. [CSV file](#)

plot(recruits~stock,data=PikeWindermere,subset=basin=="South",main="South")
par(op)
```

PSalmonAK

Stock and recruitment data for Alaskan Pink Salmon, 1960-1990.

Description

Harvest, escapement, and return of northern Southeast Alaska Pink Salmon (*Oncorhynchus gorbuscha*), 1960-1991, and average sea surface temperature between June and November off Sitka, Alaska, 1960-1990.

Format

A data frame of 34 rows on the following 5 variables:

year Year of data

harvest Harvest (thousands of fish)

escapement Escapement (thousands of fish)

return Returns (thousands of fish) as sum of harvest and escapement from two years later (lagging is for proper brood year correspondence)

SST Average sea surface temperature (C) between June and November off Sitka, AK from one year latter (lagging is for matching when the salmon are actually in the ocean)

Topic(s)

- Stock-Recruit
- Recruitment

Source

From Table 3.1 in Quinn, T.J. and R.B. Deriso. 1999. Quantitative Fish Dynamics. Oxford University Press, New York, New York. [CSV file](#)

Examples

PygmyWFBC

Biological data for Pygmy Whitefish from Dina Lake #1 (British Columbia), 2000 and 2001.

Description

Biological information for Pygmy Whitefish (*Prosopium coulterii*) from Dina Lake #1 (British Columbia), 2000 and 2001.

Format

A data frame with 690 observations on the following 13 variables.

year Year of capture (2000, 2001)

month Month of capture

week Week within a month of capture

net_no Unique net identification number

fish_no Unique fish identification number

fl Fork length (cm)

tl Total length (cm)

wt Weight (g)

sex Sex code (F=Female, M=Male, Imm=immature)

mat Maturity code (Imm=immature, MG=maturing, MT=mature)

scale_age Scale age (in years)

oto_age Otolith age (in years)

USE Should the individual be used for analyses.

Topic(s)

- Weight-Length
- Age Comparison
- Condition
- Length Frequency

Note

The tl and USE variables were added for teaching purposes only. The tl was created from fl using a known fl-tl relationship and a small random error.

RBSmeltErie

Recruitment time-series for Rainbow Smelt in Lake Erie, 1977-1996.

Description

Rainbow Smelt (*Osmerus mordax*) recruitment time series for Lake Erie, 1977-1996.

Format

A data frame of 20 observations on the following 2 variables:

year Year of data.

recruits Number of recruits (per hour).

Topic(s)

- Recruitment time-series

Note

Zeros were changed to 0.1 in 1984, 1987, 1991, and 1994.

Source

Riffleshell

Summarized multiple mark-recapture data for Tan Riffleshell.

Description

Summarized multiple mark-recapture data for Tan Riffleshell.

Format

A data frame with 6 observations on the following 4 variables.

t Sample number

caught Total number of fish caught in the sample

recaps Number of previously marked fish in the sample

retmarks Number of marked fish returned to the population

Details

The number of mussels caught in multiple samples of Tan Riffleshell (*Epioblasma florentina walkeri*) from Indian Creek, Virginia. The caught fish were examined for previous marks, marked (if previously unmarked), and then returned to the population.

Topic(s)

- Population Size

SalmonidsMCCA

Catches in removal events of Cutthroat Trout and Steelhead of various sizes in two reaches of McGarvey Creek (CA).

Description

Catches in removal events of Cutthroat Trout (*Oncorhynchus clarki*) and Steelhead (*Oncorhynchus mykiss*) of various sizes in two reaches of McGarvey Creek (CA).

Format

A data frame of 5 observations on the following 5 variables:

reach Sampling location.

group Size or species caught (fry=both age-0 Cutthroat Trout and Steelhead, Steelhead=age-1+ Steelhead, or Cutthroat=age-1+ Cutthroat Trout).

pass1 Catch on the first removal pass.

pass2 Catch on the second removal pass.

pass3 Catch on the third removal pass.

Details

Sampling was conducted using a Smith Root model 15-D POW electrofisher. Block nets were placed at upstream and downstream reach boundaries. Efforts were made to keep the effort consistent between passes. Fixed electrofisher settings were used to maintain capture probabilities during sampling. Index reaches were rested for at least 90 minutes between passes to allow recovery time for fish not captured. Fish were measured (fork length in mm) and weighed to the nearest 0.1 gm. Scales were collected from below the dorsal fin on both left and right sides of selected fish. After data were recorded for each pass, fish were placed in a floating live car until all sampling was completed. Fish were then released throughout the reach.

Topic(s)

- Population size
- Abundance
- Removal

SculpinALTER

Biological data for Slimy Sculpin from the Arctic LTER (AK).

Description

Biological data (length, weight, and age) for Slimy Sculpin (*Cottus cognatus*) sampled from Lake S-6 of the Arctic Long Term Ecological Research location.

Format

A data frame of 117 observations on the following 3 variables:

w Weight (nearest 0.1 g) at capture

tl Total length (nearest mm) at capture

age Age (completed growing seasons from otoliths) at capture

Details

Slimy Sculpin were captured from Lake S-6 during the summers of 1988 and 1989. Sculpins were captured using canning jars with acetate funnels inserted in them (similar in design to some minnow traps). The sculpin traps were set by raft and placed on the bottom of the lake in a specific habitat (inshore, rocky, rock-mud interface, and mud bottom). (Roughly) every three days the traps were retrieved and the sculpins, if any, were removed. The ages of the fish were determined by counting the rings in their otoliths.

par(op)

ShadCR	<i>Ages of American Shad assigned from scales by three readers at two times.</i>
--------	--

Description

Ages of American Shad (*Alosa sapidissima*) assigned from scales by three readers at two times.

Format

A data frame with 53 observations on the following 8 variables.

fishID A unique fish identification number

trueAge The true age of the fish

agerA1 Ages assigned by reader A at time 1

agerA2 Ages assigned by reader A at time 2

agerB1 Ages assigned by reader B at time 1

agerB2 Ages assigned by reader B at time 2

agerC1 Ages assigned by reader C at time 1

agerC2 Ages assigned by reader C at time 2

Details

The true ages for fish in their sample were known because the Shad had been marked prior to being stocked. Additionally, 13 biologists twice (independently) estimated the age from scales for each fish. The known age of the fish (`trueAge`) and the age estimates from three of the 13 biologists are available in this data.frame. The estimated age variables are labeled with `ager`, a letter for the three biologists (A, B, or C) and a number for which time the scale was interpreted (1 or 2). Some biologists chose not to assign an age to some scales and, thus, those data are missing (shown as NA values).

Topic(s)

- Age Comparison
- Age Precision
- Age Bias
- Ageing Error

Note

Used in the [Introductory Fisheries Analyses with R](#) book.

Source

From McBride, R.S., Hendricks, M.L., and Olney, J.E. 2005. Testing the validity of Cating's (1953) method for age determination of American Shad using scales. *Fisheries*, 30:10-18. Obtained directly from Rich McBride. [CSV file](#)

 ShrimpGuam

Catch and effort data for Deepwater Caridean Shrimp.

Description

Catch and effort data for Deepwater Caridean Shrimp (*Heterocarpus laevigatus*) from 15 days in 1984 from near Alamagan Islan in the Marian Archipelago (near Guam).

Format

A data frame with 15 observations on the following 4 variables.

day Day of the catch. Day 9 is 9-Jan-1984.

standard Catch (kg) of of Shrimp in the standard traps.

pyramid Catch (kg) of of Shrimp in the pyramid traps.

effort Total effort (trap-nights) for the standard traps.

Details

Catch (kg) and effort (trap-nights) of Deepwater Caridean Shrimp (*Heterocarpus laevigatus*) from 15 days in 1984 from near Alamagan Islan in the Marian Archipelago (near Guam). The data start on 9-Jan-1984. Catches were recorded separately for standard traps and in pyramid traps.

The original authors estimated populations size using the Leslie method with the cumulative catch from the combined catch in the standard and pyramid traps, but with a CPE computed from just the catch in standard traps.

Topic(s)

- Population size
- Abundance
- Depletion methods
- Leslie method
- DeLury method
- Catchability

Source

SnapperHG1	<i>Age (subsample) and length (all fish) of Snapper from two survey locations.</i>
------------	--

Description

A large sample (not random or proportional) of Snapper (*Pagrus auratus*) were aged from otoliths, with the remainder of the fish just measured for length. Note that age-20 is actually age 19+.

Format

A data frame of 18421 observations on the following 3 variables:

len Measured lengths (cm)

age Ages assigned from examination of otoliths

survey Survey location (KAH8810 or KAH0012)

Topic(s)

- Age-Length Key

Note

The unaged fish were simulated from Table 5 assuming that the total number of fish was large enough that at least one fish was observed in each cell where a proportion was listed.

Source

Recreated from Tables 2, 3, and 5 in Davies, N.M. and C. Walsh. 2002. Snapper age and length samples from Kaharoa research trawl surveys KAH8810 and KAH0012 of the Hauraki Gulf. Final Research Report for Ministry of Fisheries Research Project SNA2000/01. National Institute of Water and Atmospheric Research. [Was (is?) from <http://fs.fish.govt.nz/Page.aspx?pk=113&dk=22516>.] [CSV file](#)

## Extract the aged sample
sn1.aged <- subset(sn1,!is.na(age))
str(sn1.aged)

## Extract the length sample
```

```
sn1.length <- subset(sn1, is.na(age))
str(sn1.length)
```

SnapperHG2

Ages (subsample) and lengths (all fish) for Snapper.

Description

A large sample (approximately fixed sample size per length interval) of Snapper (*Pagrus auratus*) were aged, with the remainder of the fish just measured for length. Note that age-16 is actually age 16+ and length 60 is for 60-64 cm and 65 is for 65+ cm.

Format

A data frame of 6724 observations on the following 2 variables:

len Measured lengths (cm)

age Ages assigned

Topic(s)

- Age-Length Key

Source

Recreated from summarized results in Table 8.3 of Quinn, T. J. and R. B. Deriso. 1999. Quantitative Fish Dynamics. Oxford University Press, New York, NY. 542 p. [CSV file](#)

SockeyeSR	<i>Stock and recruitment data for Skeena River Sockeye Salmon, 1940-1967.</i>
-----------	---

Description

Stock and recruitment data for Skeena River Sockeye Salmon (*Oncorhynchus nerka*), 1940-1967.

Format

A data frame with 28 observations on the following 3 variables.

year a numeric vector of years

spawners a numeric vector giving number of spawning fish (in thousands)

recruits a numeric vector containing the recruitment (thousands)

Topic(s)

- Stock-Recruit
- Recruitment

Note

The dataset is usually analysed without case 12 because a rockslide occurred that year.

```

StripedBass1

Ages of Striped Bass assigned from scales and otoliths.

Description

Ages of Striped Bass (*Morone saxatilis*) assessed from heat-pressed scales and cracked-and-burnt otoliths.

Format

A data frame of 343 observations on the following 2 variables:

ageO Age assigned from examination of otoliths

ageS Age assigned from examination of scales

Topic(s)

- Age Comparison
- Age Precision
- Age Bias
- Ageing Error

Source

From Figure 6 in Chapter 10 (Striped Bass) of the VMRC Final Report on Finfish Ageing, 2000 by the Center for Quantitative Fisheries Ecology at Old Dominion University. [CSV file](#)

Examples

SturgeonBL

Summarized multiple mark-recapture data for Lake Sturgeon.

Description

The number of Lake Sturgeon (*Acipenser fulvescens*) caught in multiple samples from Black Lake, MI in 1997. The caught fish were examined for previous marks, marked (if previously unmarked), and then returned to the population.

Format

A data frame with 6 observations on the following 4 variables:

t Sample number

caught Total number of fish caught in the sample

recaptures Number of previously marked fish in the sample

retmarks Number of marked fish (previously and newly marked) returned to the population

Topic(s)

- Population Size
- Abundance
- Mark-Recapture
- Capture-Recapture
- Schnabel
- Schumacher-Eschmeyer

Source

From Table 1 in Baker, E.A. and D.J. Borgeson. 1999. Lake sturgeon abundance and harvest in Black Lake, Michigan, 1975-1999. North American Journal of Fisheries Management 19:1080-1088. [CSV file](#)

SturgeonGB	<i>Capture years and ages for Lake Sturgeon from Goulais Bay, Lake Superior, Ont.</i>
------------	---

Description

Pratt et al. (2014) recorded the capture years and ages for Lake Sturgeon captured in multiple gillnet sets in Goulais Bay, Lake Superior (Ontario) in July 2010-2012.

Format

A data frame with 436 observations on the following 2 variables.

year Year of capture

age Age (yrs; from pectoral fin ray)

Topic(s)

- Year-class Strength

Note

Used in the [Introductory Fisheries Analyses with R](#) book.

Source

From Pratt, T.C., Gardner, W.M., Pearce, J., Greenwood, S., and Chong, S.C. 2014. Identification of a robust Lake Sturgeon (*Acipenser fulvescens* Rafinesque, 1917) population in Goulais Bay, Lake Superior. *Journal of Applied Ichthyology* 30:1328-1334. Obtained directly from Tom Pratt. [CSV file](#)

SunfishIN

Summarized multiple mark-recapture data for Redear Sunfish.

Description

The number of Redear Sunfish (*Lepomis microlophus*) caught in multiple samples from Gordy Lake, IN. The caught fish were examined for previous marks, marked (if previously unmarked), and then returned to the population.

Format

A data frame with 6 observations on the following 4 variables:

t Sample number

caught Total number of fish caught in the sample

recaps Number of previously marked fish in the sample

retmarks Number of marked fish returned to the population

Topic(s)

- Population Size
- Abundance
- Mark-Recapture
- Capture-Recapture
- Schnabel
- Schumacher-Eschmeyer

SunfishLP

Catch-at-age for Bluegill and Redear Sunfish in Florida.

Description

The percent frequency of of Bluegill (*Lepomis macrochirus*) and Redear Sunfish (*Lepomis microlophus*) caught in Lake Panasoffkee, FL.

Format

A data frame with 12 observations on the following 3 variables:

species Species of sunfish (bluegill or redear)

age Age (yrs from otoliths)

perc.freq Percent frequency of fish collected in 1998

Topic(s)

- Mortality
- Catch curve

Source

From (approximately) Figure 2 in Crawford, S. and M.S. Allen. 2006. Fishing and natural mortality of Bluegills and Redear Sunfish at Lake Panasoffkee, Florida: Implications for size limits. North American Journal of Fisheries Management 26:42-51. Note that I added a percentage for age-1 fish (the difference in percentages from Fig. 2). [CSV file](#)

Examples

TPrawnsEG

Stock and recruitment data for Exmouth Gulf Tiger Prawn, 1970-83.

Description

Stock and recruitment data for Exmouth Gulf Tiger Prawn (*Panaeus esculentus*), 1970-1983.

Format

A data frame with 14 observations on the following 5 variables.

year a numeric vector of years

stock a numeric vector giving the index of spawning stock fish

recruits a numeric vector containing the index of recruits

cycloneJan a numeric vector containing the relative rainfall in January as an index of cyclonic activity

cycloneFeb a numeric vector containing the relative rainfall in February as an index of cyclonic activity

Topic(s)

- Stock-Recruit
- Recruitment

Source

From table 9.1 in Haddon, M. 2000. Modeling and Quantitative Methods in Fisheries, CRC Press. Originally from Penn, J. W., and Caputi, N. 1986. VendaceLP

Stock and recruitment data for Vendace from Lake Puulavesi, 1982-1996.

Description

Vendace (*Coregonus albula*) recruitment by year in Lake Puulavesi, 1982-1996.

Format

A data frame of 15 observations on the following 3 variables:

year Year of data

stock Spawning stock index – autumn biomass (kg/ha) of age-1+ fish

recruits Recruit index – density (indivs/ha) of age-0+ fish in first autumn

Topic(s)

- Stock-Recruit
- Recruitment

Source

From (approximately) Figure 1 and 2 of Marjomaki, T.J. 2004. Analysis of the spawning stock-recruitment relationship of vendace (*Coregonus albula* (L.)) with evaluation of alternative models, additional variables, biases and errors. Ecology of Freshwater Fish 13:46-60. [CSV file](#)

Examples

```

WalleyeEL	<i>Stock and recruitment data for Walleye from Escanaba Lake, WI, 1958-1992.</i>
-----------	--

Description

Abundance of age-0 and age-5 and older Walleye (*Sander vitreus*), abundance of adult Yellow Perch (*Perca flavescens*), and coefficient of variation of May temperatures for Escanaba Lake, WI, 1958-1992.

Format

A data frame of 39 observations on the following 5 variables:

yrclass Year-class of the data

age0 Abundance of age-0 Walleye (recruits)

age5 Abundance of age-5 and older Walleye (stock)

maycv Coefficient of variation of May temperatures in birth year

yep Abundance of adult (larger than 152.4 mm) Yellow Perch

Topic(s)

WalleyeErie2

Biological data for Walleye from Lake Erie, 2003-2014.

Description

Walleye (*Sander vitreus*) biological data (length, weight, sex, maturity, and age) from several locations in Lake Erie, October-November of 2003-2014.

Format

A data frame of 33734 observations on the following 10 variables:

setID Unique gear (multifilament gill net keged 6 ft below surface) set identification number.

loc Regional location (1=Toledo to Huron, 2=Huron to Fairport Harbor, 3=Fairport Harbor to Conneaut).

grid 2.5-minute sampling grid location.

year Year of data.

tl Total length (mm).

w Weight (g). There are several missing values.

sex Sex (female, male).

mat Maturity (immature, mature).

age Age (yrs) from otoliths.

Topic(s)

WalleyeKS

*Catch-at-age for Walleye from eight Kansas reservoirs.***Description**

Catch-at-age for Walleye (*Sander vitreus*) from eight Kansas reservoirs during 1991-1999.

Format

A data frame with 66 observations on the following 3 variables.

reservoir Reservoir (Cedar.Bluff, Cheney, Glen.Elder, Kirwin, Lovewell, Marion, Webster, Wilson)

age Age of fish at capture

catch Number of fish captured

Topic(s)

- Mortality
- Catch curve

Note

The authors used all age-2 and older Walleye to construct the catch curves.

WalleyeML *Back-calculated lengths-at-age for Walleye from Lake Mille Lacs, 2000-2011.*

Description

Back-calculated lengths-at-age for Walleye (*Sander vitreus*) from Lake Mille Lacs. Walleye were captured by Minnesota Department of Natural Resources personnel in fishery-independent gillnets (five multifilament nylon mesh panels with each panel measuring 15.2 m wide and 1.8 m high; bar-measure mesh sizes of the panels were 19.1, 25.4, 31.7, 38.1, and 50.8 mm) set in the fall (mid September to early October) from 2000 to 2011.

Format

A data frame of 14583 observations on the following 9 variables:

ID A unique fish identification number.

Year Year of data.

Sex Sex (female, male).

Est.Age Estimated (from otoliths) age (yrs) at capture.

TL Total length (mm).

Scale.Rad Total scale radius (mm) at capture.

Dist.Ann Scale radius (mm) to annulus given in BC . Age.

BC.Age Annulus or previous age.

BC.Len Back-calculated length at BC . Age. Lengths were back-calculated using the *Scale-Proportional Hypothesis* method.

Topic(s)

- Growth
- von Bertalanffy
- Back-calculation

WalleyeMN06a

Catch-at-age for Walleye.

Description

Catch-at-age for Walleye (*Sander vitreus*) collected from four lakes in Northern Minnesota, USA.

Format

A data frame with 52 observations on the following 3 variables.

lake A factor vector of collection lake (Crooked, Fourmile, Island, Tom)

age A numeric vector of assigned ages (from dorsal spines)

number A numeric vector of number of fish

Topic(s)

- Mortality
- Catch curve

Source

From various tables in Borkholder, B.D., A.J. Edwards, and C. Olson. 2007. Spring adult and fall juvenile walleye population surveys within the 1854 ceded territory of Minnesota, 2006. Fond du Lac Division of Resource Management, Technical Report 41. [CSV file](#)

WalleyeMN06b

Summarized multiple mark-recapture data for Walleye from four lakes in Northern Minnesota.

Description

Summary results of capture histories (number captured, number of recaptured fish, and number of unmarked fish that were marked) for Walleye (*Sander vitreus*) collected from four lakes in Northern Minnesota, USA.

Format

A data frame with 20 observations on the following 5 variables.

lake Studied lake (Crooked, Fourmile, Island, Tom)

date Capture date

catch Total fish captured in each sample

recap Marked fish captured in each sample

retMark Marked fish returned to the population

Topic(s)

- Population Size
- Abundance
- Mark-Recapture
- Capture-Recapture
- Schnabel
- Schumacher-Eschmeyer

Source

From appendix 2 in Borkholder, B.D., A.J. Edwards, and C. Olson. 2007. Spring adult and fall juvenile walleye population surveys within the 1854 ceded territory of Minnesota, 2006. Fond du Lac Division of Resource Management, Technical Report 41. [CSV file](#)

WalleyePL

Summarized multiple mark-recapture data for YOY walleye.

Description

The numbers of young-of-year walleye (*Sander vitreus*) that were captured, found to have previous marks (i.e., recaptured), and were newly marked on several sampling occasions in 1959, 1960, 1961, and 1962 in Pike Lake, Wisconsin.

Format

A data frame with 33 observations on the following 5 variables:

year Sampling year

t Sampling occasion within each year

caught Number of walleye captured

recaptures Number of marked walleyes captured

newmarks Number of unmarked walleyes that were captured, marked, and returned to the population

Topic(s)

- Population Size
- Abundance
- Mark-Recapture
- Capture-Recapture
- Schnabel
- Schumacher-Eschmeyer

Source

From table 3 of Mraz, D. 1968. Recruitment, growth, exploitation, and management of walleyes in a southeastern Wisconsin lake. Wisconsin Department of Natural Resources Technical Bulletin 40. 38 pages. [CSV file](#)

WalleyePS

Ages of Walleye assigned from otoliths, scales, and spines.

Description

Age of Pymatuning Sanctuary (PA) Walleye (*Sander vitreus*) assessed from three calcified structures – sectioned otoliths, sectioned dorsal spines, and scale impressions.

Format

A data frame with 61 observations on the following 4 variables:

otolith Age (years) assigned from broken, ground, and polished otolith sections

spine Age (years) assigned from dorsal spine sections

scale Age (years) assigned from scale impressions

sex Sex of fish (female and male)

Topic(s)

- Age Comparison
- Age Precision
- Age Bias
- Ageing Error

Note

Relationships between otoliths and spines and otoliths and scales are exact according to Figure 2. Relationship between spines and scales is approximate as Figure 2 did not show this exact relationship.

Source

From Figure 2 in Kocovsky, P.M., and R.M. Carline. 2000. A comparison of methods for estimating ages of unexploited walleyes. North American Journal of Fisheries Management 20:1044-1048.

WalleyeRL

Growth increment data for Red Lakes Walleye.

Description

Growth increment data for Red Lakes Walleye (*Sander vitreus*) in one-fish-per-line format.

Format

A data frame with 1543 observations on the following 13 variables.

fish A fish identification number. Unique within a year but not across years.

yearcap Year the fish was captured.

ce A factor denoting capture gear (C=commercial and E=experimental nets).

agecap Age of fish at capture.

lencap Length of fish at capture.

inc1 Scale measurement to first annulus.

inc2 Scale measurement between first and second annulus.

inc3 Scale measurement between second and third annulus.

inc4 Scale measurement between third and fourth annulus.

inc5 Scale measurement between fourth and fifth annulus.

inc6 Scale measurement between fifth and sixth annulus.

inc7 Scale measurement between sixth and seventh annulus.

radcap Scale radius at time of capture

Topic(s)

- Growth increment analysis
- Weisberg linear growth model

Note

Data is in one-fish-per-line format.

Source

WalleyeWad	<i>Catches-at-age for male and female Walleye from Lake Winnebago, WI, 2010.</i>
------------	--

Description

Catches-at-age for male and female Walleye from Lake Winnebago, WI, 2010.

Format

A data frame with 18 observations on the following 3 variables.

age Age (yrs; from pectoral fin ray)

numF Number of captured females

numM Number of captured males

Details

Koenigs et al. (2015) captured adult Walleye from Lake Winnebago during spawning assessments in 2010. The sex was recorded and ages were estimated from sectioned otoliths for each fish. Koenigs et al. (2015) fit separate catch curves to female and male Walleye.

Topic(s)

- Mortality
- Catch Curve

Note

Used in the [Introductory Fisheries Analyses with R](#) book.

Source

From Koenigs, R.P., Bruch, R.M., Stelzer, R.S., and Kamke, K.K. 2015. Validation of otolith ages for Walleye (*Sander vitreus*) in the Winnebago System. Fisheries Research, 167:13-21. Obtained directly from Ryan Koenigs. [CSV file](#)

WalleyeWyrIng	<i>Annual catches of yearling Walleye in bottom trawls from Lake Winnebago, WI, 1986-2010.</i>
---------------	--

Description

Annual catches of yearling Walleye (*Sander vitreus*) in bottom trawls from Lake Winnebago, WI, 1986-2010.

Format

A data frame with 35 observations on the following 4 variables.

tows Number of trawl tows (i.e., effort)

year Year of capture

yearlings Number of yearling Walleye captured

yrclass Year-class of the captured yearlings (capture year minus 1)

Details

The catch of yearling Walleye and number of trawl tows by year are in this data.frame. The CPE is catch divided by number of tows. Koenigs et al. (2015) rescaled the CPE values to have a mean of 0 and a standard deviation of 1.

Topic(s)

- Year-class Strength
- Recruitment

Note

Used in the [Introductory Fisheries Analyses with R](#) book.

WhitefishGSL

Catch-at-age of Great Slave Lake Whitefish (commercial) by area.

Description

Age composition of commercial Whitefish (*Coregonus clupeaformis*) catches for five areas of Great Slave Lake.

Format

A data frame with 16 observations on the following 6 variables:

age Assigned ages.

area.IE Catches for area IE.

area.II Catches for area II.

area.IV Catches for area IV.

area.V Catches for area V.

area.IW Catches for area IW.

Topic(s)

- Mortality
- Catch curve

Note

All data are from summer samples except for Area.IW which is a winter sample

Source

From Table 19 of Mosenko, R.W., and G. Low. 1980. Data from the commercial fishery for lake whitefish *Coregonus clupeaformis* (Mitchill), on Great Slave Lake, Northwest Territories, 1979. Canadian Data Report of Fisheries And Aquatic Sciences, No. 194. [CSV file](#)

WhitefishLS

Landings and value of Lake Superior Lake Whitefish.

Description

Landings and value of Lake Whitefish *Coregonus clupeaformis* in Lake Superior by state from 1971-2001.

Format

A data frame with 12 observations on the following 4 variables:

year Year of catch.
state State of catch (MI, MN, or WI).
catch Catch in lbs.
value Value of catch in dollars.

Topic(s)

- Other

Source

Results from a query in 2006 to the NMFS Great Lakes Commercial Fishery Landings database.

WShrimpGA

Stock and recruitment data for White Shrimp off the coast of Georgia (USA), 1979-2000.

Description

White Shrimp (*Litopenaeus setiferus*) stock and recruitment data from off the coast of Georgia (USA), 1979-2000.

Format

A data frame with 22 observations on the following 3 variables:

year Year of data

stock Spawning stock index – CPUE in June assessment surveys

recruits Recruit index – commercial landings in pounds from Aug-Jan

yrconf A code of confidence for whether or not the stock value is known to come from the year shown (see the note)

Topic(s)

- Stock-Recruit
- Recruitment

Note

No graph was shown for stock values vs. year so some stock values had to be haphazardly paired with recruit values – especially for stock values between 2.5 and 3.0.

Source

From (approximately) Figures 2 and 3 of Belcher, C.N., and C.A. Jennings. 2004. Evaluation of stock-recruitment curves for white shrimp in Georgia. North American Journal of Fisheries Management 24:654-661. [CSV file](#)

YERockfish

Ages, lengths, and maturity for Yelloweye Rockfish.

Description

Ages, lengths, and maturity for female Yelloweye Rockfish (*Sebastes rubberimus*) from Oregon.

Format

A data frame with 159 observations on the following 5 variables.

date Date fish was collected

length Total length (cm)

age Otolith age

maturity Maturity state (Immature or Mature)

stage Stage of maturity (1:Immature, 2:Maturing, 3:Mature, 4:Fertilized, 5:Ripe, 6:Spent, 7:Resting)

Topic(s)

- Growth
- Maturity
- von Bertalanffy

Source

Obtained directly (from Bob Hannah). Data were used in Hannah, R.W, M.T.O. Blume, and J.E. Thompson. 2009. Length and age at maturity of female yelloweye rockfish (*Sebastes rubberimus*) and cabezon (*Scorpaenichthys marmoratus*) from Oregon waters based on histological evaluation of maturity. Oregon Department of Fish and Wildlife, Information Reports 2009-04. [Was (is?) from http://www.dfw.state.or.us/mrp/publications/docs/Info200904_YlwEyeRF_Maturity.pdf] [CSV file](#)

YPerchCBI

Catch-at-age for Yellow Perch from Chequamegon Bay, Lake Superior.

Description

Catch-at-age for Yellow Perch (*Perca flavescens*) from Chequamegon Bay, Lake Superior, 1973-1988.

Format

A data frame with 39 observations on the following 5 variables.

age Age in that capture year (1973-1988).

year73 Number of fish at each age in capture year 1973.

year74 Number of fish at each age in capture year 1974.

year75 Number of fish at each age in capture year 1975.

year76 Number of fish at each age in capture year 1976.

year77 Number of fish at each age in capture year 1977.

year78 Number of fish at each age in capture year 1978.

year79 Number of fish at each age in capture year 1979.

year80 Number of fish at each age in capture year 1980.

year81 Number of fish at each age in capture year 1981.
year82 Number of fish at each age in capture year 1982.
year83 Number of fish at each age in capture year 1983.
year84 Number of fish at each age in capture year 1984.
year85 Number of fish at each age in capture year 1985.
year86 Number of fish at each age in capture year 1986.
year87 Number of fish at each age in capture year 1987.
year88 Number of fish at each age in capture year 1988.

YPerchCB2	<i>Stock and recruitment data for Yellow Perch in Chequamegon Bay, 1975-1986.</i>
-----------	---

Description

Yellow Perch (*Perca flavescens*) stock-recruitment by year-class in Chequamegon Bay, 1975-1986.

Format

A data frame with 12 observations on the following 2 variables:

yrclass Year-class (see below)

stock Estimated numbers of mature females caught the year prior to the origin of the 1975-1986 year classes

recruits Catches of age-2 fish (when the year-class is formed)

Topic(s)

- Stock-Recruit
- Recruitment

Source

From (approximately) Figure 7 in Bronte et al. 1993. Dynamics of a yellow perch population in Western Lake Superior. North American Journal of Fisheries Management. 13:511-523. [CSV file](#)

Examples

```
data(YPerchCB2)
str(YPerchCB2)
head(YPerchCB2)
op <- par(mfrow=c(1,2),pch=19)
plot(recruits~yrclass,data=YPerchCB2,type="b")

YPerchGB

Recruitment time-series for Yellow Perch in Green Bay, 1978-1992.

Description

Yellow Perch (*Perca flavescens*) recruitment time-series for Green Bay, 1978-1992.

Format

A data frame with 15 observations on the following 2 variables:

year Year of data.

recruits Number of recruits (thousands per hour).

Topic(s)

- Recruitment time-series

Source

From Walters, C., and A. Punt. 1994. Placing odds on sustainable catch virtual population analysis and survey data. Canadian Journal of Fisheries and Aquatic Sciences, 51:946-958. Obtained from Ransom Myers old online database. [CSV file](#)

Examples

```
data(YPerchGB)
str(YPerchGB)
head(YPerchGB)
plot(recruits~year, data=YPerchGB)
```

YPerchGL

Lengths and weights of Yellow Perch from Grafton Lake (ME) by year.

Description

Yellow Perch (*Perca flavescens*) fork lengths and weights separated by year.

Format

A data frame with 100 observations on the following 3 variables:

fl Fork Length (nearest mm) at capture

w Weight (nearest 0.1 g) at capture

year Year of capture (1994 or 2000)

Topic(s)

- Weight-Length
- Length Frequency

Source

From (approximately) Figure 3 in Brylinsky, M. 2001. An evaluation of changes in the yellow perch (*Perca flavescens*) population of Grafton Lake, Kejimikujik National Park, after dam removal. Technical Report Publication No. 59, Acadia Centre for Estuarine Research. [CSV file](#)

YPerchRL

Recruitment time-series for Yellow Perch in Red Lakes, MN, 1942-1960.

Description

Yellow Perch (*Perca flavescens*) recruitment time-series for Red Lakes, MN, 1942-1960.

Format

a data.frame with:

year Year of data.

recruits CPUE of recruits (relative to a mean).

Topic(s)

- Recruitment time-series

Source

From Smith, L.L. Jr. 1977. Walleye (*Stizostedion vitreum*) and yellow perch (*Perca flavescens*) populations and fisheries of the Red Lakes, Minnesota, 1930-75. J. Fish. Res. Board Can. 34: 1774-1783. Obtained from Ransom Myers old online database. [CSV file](#)

YPerchSB	<i>Stock and recruitment data for Yellow Perch from South Bay, Lake Huron, 1950-1983.</i>
----------	---

Description

Yellow Perch (*Perca flavescens*) stock and recruitment by year in South Bay, Lake Huron, 1950-1983.

Format

A data frame with 15 observations on the following 3 variables:

year Year of data
stock Spawning stock (number per set)
recruits Recruits (number per set)

Topic(s)

- Stock-Recruit
- Recruitment

Source

From Henderson, B.A. 1985. Factors affecting growth and recruitment of yellow perch, *Perca flavescens* Mitchill, in South Bay, Lake Huron. Journal of Fisheries Biology 26:449-458. Obtained from Ransom Myers old online database. [CSV file](#)

```

YPerchSB1	<i>Lengths for Yellow Perch from two locations in Saginaw Bay, Lake Michigan.</i>
-----------	---

Description

Length measurements for Yellow Perch (*Perca flavescens*) from two locations – inner and outer bay – in Saginaw Bay, Lake Michigan.

Format

A data frame with 2074 observations on the following 2 variables:

- tl** Measured total length (cm).
- loc** Location of capture (inner or outer).

Topic(s)

- Length Frequency
- Size Structure
- PSD

Source

Simulated (uniform distribution of values within length bin) from summarized length frequencies in Figure 2 (top) in Diana, J.S. and R. Salz. 1990. Energy storage, growth, and maturation of yellow perch from different locations in Saginaw Bay, Michigan. Transactions of the American Fisheries Society 119:976-984. [CSV file](#)

par(op)
```

YPerchTL

Lengths and weights for Yellow Perch from Trout Lake, WI.

Description

Lengths and weights for Yellow Perch (*Perca flavescens*) from Trout Lake, WI, 1981-2006. Fish were collected with a variety of gears.

Format

A data frame with 7238 observations on the following 7 variables:

lakeid Lake name (all TR=Trout Lake)

year4 Year of capture

sampledate Date of capture

gearid Capture gear type – beach seine (BSEINE), crayfish trap (CRAYTR), electrofishing (ELFISH), fyke net (FYKNET), trammel net (TRAMML), vertical gillnets of different mesh sizes (VBN0XX), and different types of fyke nets (FYKNED and FYKNEL)

spname Species name (all YELLOWPERCH)

length Total Length (nearest mm) at capture

weight Weight (nearest 0.1 or 1 g) at capture

Topic(s)

- Weight-Length
- Length Frequency
- Size Structure
- PSD

Source

From a query to the North Temperate Lakes Long Term Ecological Research, Fish Lengths and Weights Database. [CSV file](#)

Examples

```
data(YPerchTL)
str(YPerchTL)
head(YPerchTL)
plot(weight~length, data=YPerchTL)
```

YTFloUNDER

Ages of Yellowtail Flounder assigned from scales and otoliths.

Description

Ages of commercially caught Georges Bank Yellowtail Flounder (*Limanda ferruginea*) as determined by scales, whole otoliths, or otolith cross-sections.

Format

A data frame with 27 paired observations on the following 3 variables.

scale Ages assigned from scales

whole Ages assigned from whole otoliths

cross Ages assigned from cross-sections of otoliths

Topic(s)

- Age Comparison
- Age Precision
- Age Bias
- Ageing Error

Source

From tables in Annex 3 of Walsh, S.J. and J. Burnett. 2002. The Canada-United States yellowtail flounder age reading workshop: 28-30 November 2000, St. John's, Newfoundland. North Atlantic Fisheries Organization. Scientific Council Studies 35:1-59. [CSV file](#)
